Adapter-Free Utilities For System Integration

The SoftWidgets Enterprise Integration Suite (EIS) is a comprehensive set of tools designed to shuffle information throughout an enterprise and between business partners. It is lightweight in deployment and requires only intermediate IT skill levels to administer.

EIS is the software foundation for easy, adapter-free system integration.

- Requires only a single production installation
- Leverage existing systems and investments
- Utilize existing knowledge base and skill sets
- Works with all major enterprise platforms

EIS is designed for IT professionals and software developers looking to build-out or improve upon existing integration architectures.

The unique configuration interface accelerates development by reducing common programming tasks to simple configuration exercises.

No matter what language you prefer to work with or systems you need to integrate, EIS provides the tools to rapidly deploy enterprise-class solutions, yielding immediate and tangible results.

ERP Systems Integration - Facilitate interaction between two or more ERP systems and seamlessly control the flow of GL, AP and AR data.

Enterprise Reporting Systems - Generate reports in many different formats including simple HTML as well as the feature-rich Excel format. Manage complex database population requirements for more dynamic web-based reporting systems.

Extraction, Transformation and Loading - Full automation of any Oracle, IBM DB2 or Microsoft SQL Server database population and transformation tasks without any custom development.

Workflow and Email Automation - Enhance business processes with email-automated workflows.

File Routing - Guaranteed delivery of files between platforms - Mainframe, UNIX and Windows servers, all via simple configurations. No coding is necessary.

Custom-Tailored Enterprise Solutions - The inherent extensibility of the EIS platform provides software developers with a robust and flexible foundation for the most demanding enterprise initiatives.
